Using AI in Assessment Marking with GenAI

This is a side-by-side comparison showing what teachers should and shouldn't do when using generative AI for marking.

DO's	DON'Ts
Do use AI to help identify common errors and patterns in student work.	Don't rely solely on AI to assign grades or final marks.
Do use AI-generated suggestions as a starting point for personalized feedback.	Don't allow AI to replace human understanding of student progress.
Do cross-check AI feedback with your professional judgment.	Don't ignore potential AI biases or errors in analysis.
Do explain to students how AI assists in marking to ensure transparency.	Don't share students' personal data with AI tools, especially those without privacy guarantees.
Do provide students with opportunities to discuss AI feedback and ask questions.	Don't use AI feedback without adapting it to fit individual student needs and contexts.
